The warning about your car! With so many wireless functions now, could someone else suddenly take control while you're driving! From ABC News, world headquarters, this is ABC World News Tonight with David Mur! Here the new warning about millions of cars on the road. With so many wireless features now, the stunning new report that it could be possible, someone could interfere while you are driving your car. Here is ABC's chief business correspondent Rebecca Jarvis.

Tonight an alarming new report from a US senator, finding millions of cars and trucks on the road could be at risk of hack attacks! Watch as Chuck Goudy of our Chicago station WLS demonstrates, how a technology expert takes control of his car thru this computer port. "Now the engine shut off! You were able to do that with one mouse click! Yes!" The windshield wipers, out of the driver's control! "So can I start it? I don't know, can you? Because I don't know! You did that? Yeah!" Experts say a hacker could even turn some cars into oncoming traffic, although it hasn't happened yet! The warning goes even further! A **crook** wouldn't even need to be in your car to gain control of it!

The most **vulnerable components** wireless technologies like the Telematics System like OnStar and Car-Net, Info-tainment including blue tooth, hand's free and media players. Access to these and a hacker could shut down critical car functions! The **Alliance of Automobile Manufacturers**, an industry trade group says its members pledged to provide heightened protections and are making aggressive efforts to ensure that we are advancing safety! Is it a bit of nightmare? All that stuff is supposed to help us!
